

List of books.

Arrays.

JavaScript objects.

DOM.

JavaScript built-in objects (Date)

Events (click)

- Create a list of object representing books, for each book the following information will be stored:
 - Title
 - Genre
 - Author, can be list of authors
 - Pages
 - Published, date
 - Read, true/false
 - Website, can be blank
- Create a table in which each row shows one of the books.
Use DOM methods to add the rows and their contents.
- Display the following information:
 1. Name of each of the genres.
 2. Name of the authors and number of books they have written.
 3. Title of the books read, ordered by date of publishing.
 4. Title of books with more than 300 pages
 5. Title of books published more than 2 years ago

Create a button for each question.

Create a div that displays the information requested when each button is clicked.

For questions 4 and 5, in addition to displaying the information requested in the div, the corresponding rows will be highlighted.
